Ultimate Sharpness

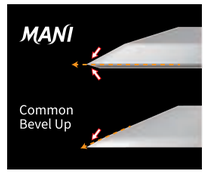

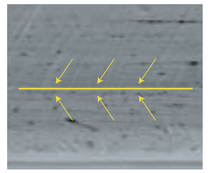

Image of Bevel

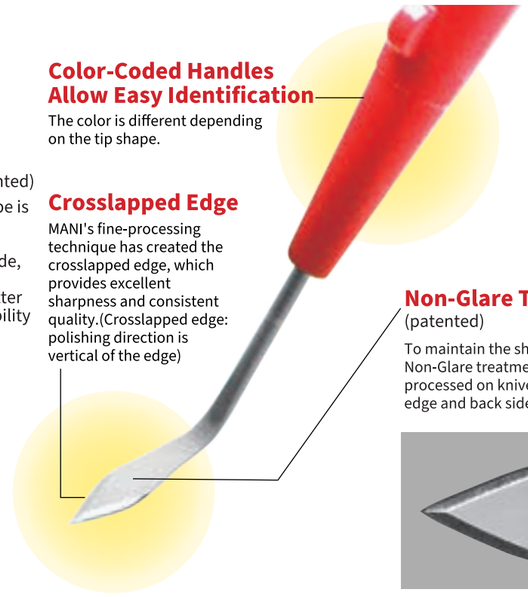

Bevel Shape (patented)
MANI original bevel shape is applied for the knives. By polishing the blade slightly from the back side, the shape provides excellent sharpness, better usability and better stability on trajectory.

MANI crosslapped edge

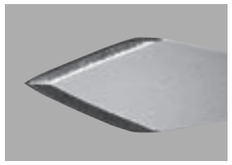

The edge and Bevel generate "Ultimate Sharpness"

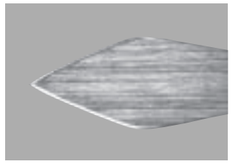

Color-Coded Handles Allow Easy Identification
The color is different depending on the tip shape.

Crosslapped Edge
MANI's fine-processing technique has created the crosslapped edge, which provides excellent sharpness and consistent quality.(Crosslapped edge: polishing direction is vertical of the edge)

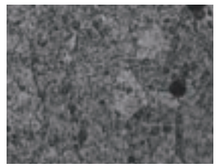

Non-Glare Treatment (patented)
To maintain the sharpness, Non-Glare treatment was processed on knives except its edge and back side.

MANI slit knife - front side (Non-Glare)

MANI slit knife - back side (without Non-Glare)

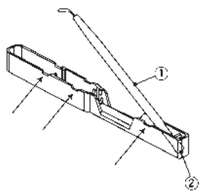

Stainless Steel Superior In Safety

Structure of MANI hard fiber stainless steel

Structure of common stainless steel

MANI's original hard fiber stainless steel (austenite stainless steel) provides reliable strength on the tip and ensure thin but solid edge. (Edge thickness of MANI slit and crescent knife: 0.14mm)

How to Handle the Case

How to Remove the Knife
While taking great care not to let the blade come into contact with any surface,gently pinch and lift section ①.

How to Store the Knife
With the blade facing downward,insert section
② fully into the slot.Then,lightly press section
① to secure the knife in place.

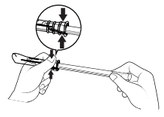

You can also rest the knife in one of the three grooves (indicated by arrows),in a manner similar to using a chopstick rest.

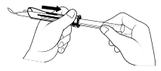

Handling Instructions

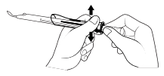

Short video available here ▶

Handling Instructions for Safety Type

1 How to Expose the Blade

①Pinch the rear end of the cover to release the lock.

②While keeping it pinched, slide the cover backward.

③Release the cover once it has been slid back fully and locked in place.

2 How to Retract the Blade
While pinching the lock release part at the rear end of the cover,slide the cover all the way forward to retract the blade into the cover.
(※Follow the blade exposure steps in reverse order.)

Comparison with
conventional knives

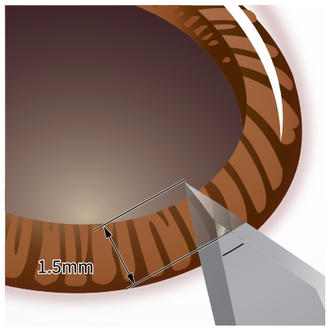

Extreme Sharpness, Simple Operation, High Visibility

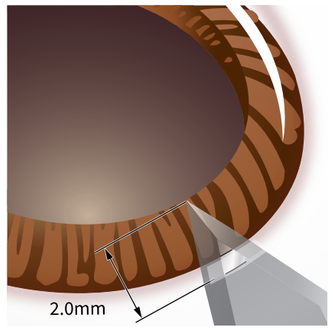

Position of Knife Angle moved 2mm towards the tip and the blade became smaller with extreme sharpness as our conventional models.Effective for a patient who has sunken/deep-set eye (enophthalmos) or narrow lid fissure. Less possibility of contacting with eye speculum and drapes.
In addition, marking lines at 1.5mm and 2.0mm from the blade tip enable simple operation for creating tunnel.

※MSL20SH～ (8mm→6mm)
※MSL25SH～ (9mm→7mm)

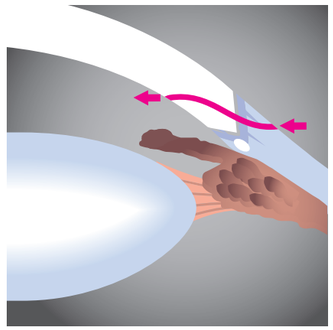

Example of use of the marking lines

Corneal Incision

Scleral Incision

Perforation towards anterior chamber using the marking lines as an indicator.

Safety Slit Knife

MSL34AB	Slit Angled 3.4mm Arched	(A 3.4mm W 3.2mm H 0.55mm)

※Better self-sealing incision. Low rink of infection.

Arched Knife is a slit knife designed for clear corneal incision with IOL injector system.

Please refer to the width in order to find your best size.
If you are using MSL24 (2.4mm) now, MSL25AB should be the correct choice as its width (W) is 2.4mm.
The incision location is different from that of normal "flat" knife because the arched knife has a three-dimensional blade.
Please make sure that your Phaco tip and Injector fit properly with the arched knife you chose. We recommend to try the compatibility between the arched knife & your Injector at a wet lab in order to find the right size from our line-up.
Please contact us for the case report.

IT IS UNABLE TO MAKE THE WOUND WIDER AFTER THE INCISION BECAUSE OF INCISION SHAPE.
Please read Instruction for Use carefully before use.

Side Port Knife

○Main Application: Side port

Angle = 30° (L)・45°

MSP

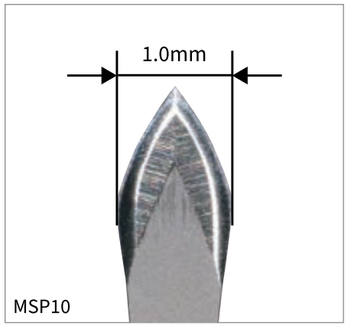

Actual size

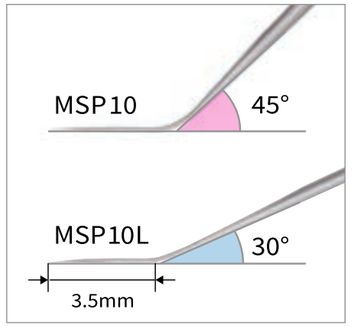

ORDER No.	Description	6pcs/box
MSP10	Side Port 1.0mm Angled 45°	
MSP10L	Side Port 1.0mm Angled 30°	

Features of Side Port Knife

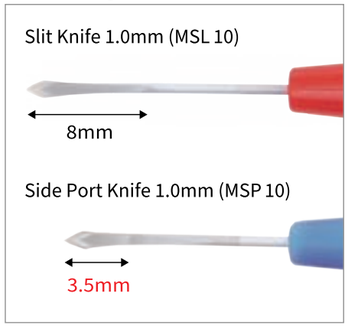

Width

Angle

Head Length

- Designed to deliver exceptional precision 1.0mm side port incision.
- Angled; 30 or 45 degree depend on condition of your patient and your prefence.
- Excellent controllability with shorter (3.5mm) head length.
  Effective for patients who have sunken/deep-set eye (enophthalmos) or narrow lid fissure.
- Stress-free incision with ultimate sharpness.
