KR-9000 / RM-9000

Auto fog system, providing stable and reliable measurements

KR-9000 / RM-9000 adopts a mature optical system, the auto fogging process can effectively reduce the accommodation of human eyes and ensure the patient refraction in the best condition.

Features and benefits

The KR-9000 / RM-9000 is an ophthalmic device, intended for:

- Optimal fogging to minimize accommodation for an accurate refraction measurement (Sphere, cylinder and axis)
- Measuring the radius of the cornea(KR-9000 model)
- Measuring the pupil distance
- Measuring the pupil size

Refraction measurement

Measuring the sphere, cylinder and axis at same time, up to 10 measured data can be recorded for each eye.

Corneal curvature measurement (KR-9000 model)

Measuring corneal curvature when choose "R&K" or "KER" mode.

And:

- Automatic measurement after alignment
- Build-in thermal printer
- One-key lock
- IOL measurement mode on/off
- Data transmission with computerized vision tester
